The role of SA in Testing & Verification

- » Objective is to use SA info to improve integration testing (BIM 97 onward)
 - Assumption is that the implementation complies to the SA
- » Other attempts at the end of the 90ties were to propose testing strategies for SA
- » In general also SA for early system validation

Measure of (in-)success

- » Share the same problems with SA
- » No “real” case studies
- » No experimental approach
